

Covid Dashboard-CoTrack

Language Used – Python, CSS

Modules Used –

1. Dash: Used for developing graphical user interface
2. Plotly: Used for data representation by plotting different types of graph
3. Pandas: Used for data manipulation and analysis
4. Dash Bootstrap: Framework used for styling

Tools Used –

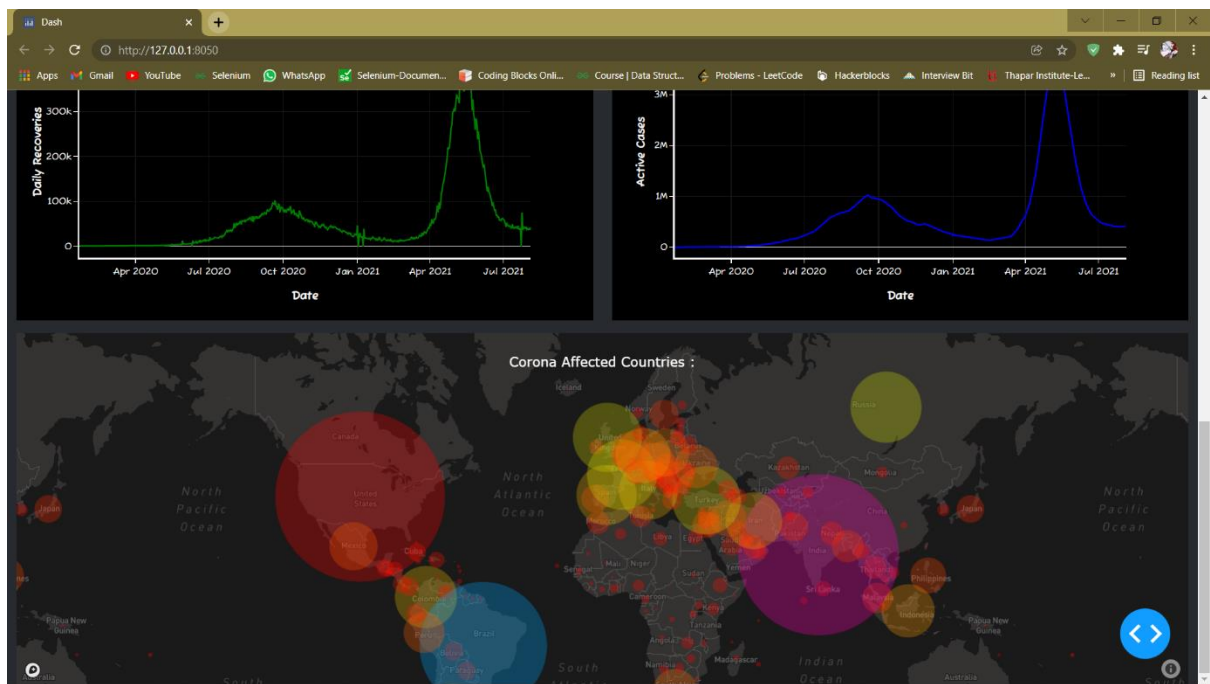

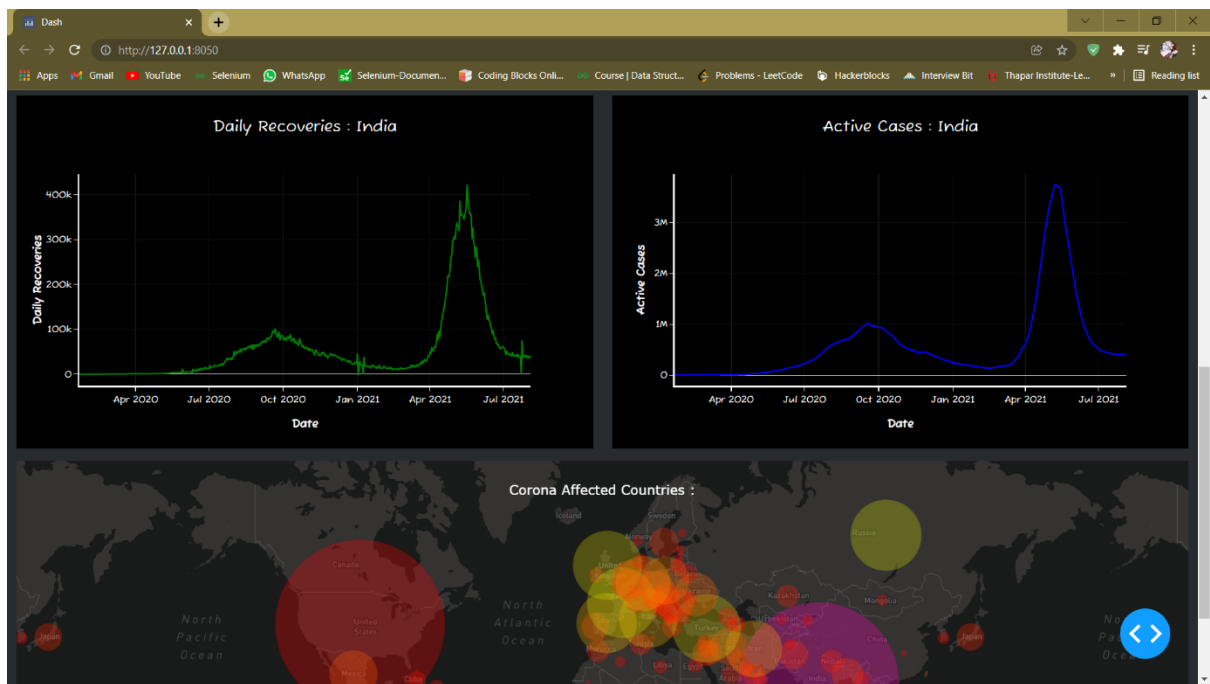

1. Pycharm
2. Mapbox

Dashboard Screenshots –

Introduction

CoTrack is an interactive tool use to help track, analyse and display data. It tells you the global stats and the new daily stats of a particular country. These stats include New cases, deaths, recoveries and active cases. CoTrack also shows the graphical representation of these stats. It also shows a global map representing how badly the countries are affected.

Graphical Analysis

1. Pie Chart: It compares the confirmed cases, recoveries, deaths, and active cases of the selected country.
2. Line Charts: There are four line charts:
 - Representing new daily cases
 - Representing daily deaths
 - Representing active cases on that date
 - Representing daily recoveries
3. Mapbox: Represents how badly each country is affected from corona.
